Overview

SPIFEE is a MATLAB-based pipeline for automated peak detection, feature extraction, and analysis of time-series trace data. **This quick start guide walks new users through their first SPIFEE run.**

Installation & Requirements

Requirements

MATLAB 2023 or higher

MATLAB Signal Processing Toolbox

Installation

1. Download the latest SPIFEE release from GitHub
2. Add SPIFEE to your MATLAB path (Add with Subfolders)
3. Run: SPIFEE_GUI

Verify Installation

Run the following command in the MATLAB Command Window:

SPIFEE_GUI

If the GUI opens, installation is successful.

Part 1: Run SPIFEE (First Time)

Step 1: File Setup.

SPIFEE can be run from any directory. Data files can be located anywhere and are selected through the GUI. Supported formats: .csv and .mat. Example folder:

Step 2: Launch SPIFEE

After locating data, run SPIFEE_GUI in the command window to open the GUI.

Step 3: Fill Required Fields

Only four inputs are required for a first run

- **NameField**
 - Leave blank for .csv or simple .mat arrays
 - Enter field name (e.g., data) if using structured .mat files
- **Peak Frequency (hours)**
 - Approximate expected oscillation period
 - Example: $p53 \approx 5-6$ hours
- **Length of Experiment (hours)**
 - Total duration of your recording
- **Data Orientation**

- Check “Each trace is a column” if traces are stored as columns

Example:

Data files are not structs, so leave BLANK

NameField	Peak Frequency (Hours)	Length of Experiment (Hours)
	5.5	24

☒ Each trace is a Column

Normalization ▼

☐ Fill in NaN Values

Peak Frequency (p53 is 5.5 hours).

Length of experiment

Data is stored as COLUMNS therefore we check this

Step 4: Run Pipeline

After filling in the required options, click “Run” at the bottom:

Run

Step 5: Select files

Select the file(s) to analyze.

- Use Shift-click or Alt-click to select multiple files
- Select a single file for one condition

	P53_HighAmp	1/7/2025 2:39 PM	MATLAB Data	23 KB
	P53_HighFreq	1/7/2025 2:40 PM	MATLAB Data	30 KB
	P53_LongDuration	1/7/2025 2:40 PM	MATLAB Data	26 KB
	P53_LowAmp	1/7/2025 2:40 PM	MATLAB Data	27 KB
	P53_LowFreq	1/7/2025 2:41 PM	MATLAB Data	26 KB
	P53_Nat	1/7/2025 2:41 PM	MATLAB Data	26 KB

SPIFEE will begin running automatically

Part 2: Advanced Options

These settings are optional, and can be adjusted after your first run

2.1 Input Optional Settings

The 'Input [Required]' panel contains the following fields and callouts:

- NameField**: Text input with 'Ex: p53FlourescentValues'. Callout: 'Filtering methods with various strengths'.
- Peak Frequency (Hours)**: Numeric input with '0'. Callout: 'Relative strength of findpeaks()'.
- Length of Experiment (Hours)**: Numeric input with '0'. Callout: 'Normalization options'.
- Each trace is a Column**: Checkbox, currently unchecked.
- Normalization**: Dropdown menu.
- Fill in NaN Values**: Checkbox, currently unchecked. Callout: 'Fill in NaN Values'.
- FilteringMethod**: Dropdown menu.
- FindPeaks() Strength**: Dropdown menu.
- NaN value percent threshold**: Text input with '10.0%'. Callout: 'NaN value percent threshold'.

2.2 Analysis & Output Options

The 'Analysis [Optional]' and 'Output [Optional]' panels contain the following fields and callouts:

Analysis [Optional]

- Clustering [Opens New Window]**: Checkbox, currently unchecked. Callout: 'Opens a new window for clustering options.'
- Average Traces**: Checkbox, currently unchecked. Callout: 'Plot the average trace per condition'.
- Means**: Checkbox, currently unchecked. Callout: 'Builds a table for the mean of each feature per condition'.
- 1st Peaks**: Checkbox, currently unchecked.
- Heatmaps**: Checkbox, currently unchecked. Callout: 'Plots a heatmap per condition of each trace'.
- Statistics Suite**: Checkbox, currently unchecked. Callout: 'Various statistical tests. Flags distinct features.'

Output [Optional]

- Save Figures as**: Text input with file type options: .svg, .fig, .png, Do not save.
- Save Output As**: Text input with 'Ex: Trial1Run1'. Callout: 'Output options (figure file type and name)'.
- Run**: Button. Callout: 'Run pipeline.'

2.3 Clustering Window

Clustering is optional and not required for standard analysis.

2.4 Data Notes

SPIFEE supports the following input formats:

- .csv files (numeric matrices)
- .mat files containing numeric arrays
- .mat files containing structured data

If using a .mat file with a structure, specify the field name containing the data in the **NameField** input.

Example:

This data file “P53_50.mat” has data contained as a field within a 1x1 struct:

Here, the data will be properly loaded if the word “data” is supplied to the NameField option in the GUI.

When loading multiple structured .mat files, ensure the data field name is **consistent across all files**. SPIFEE will not load data correctly if field names differ.

No additional input is required for .csv files or non-structured .mat arrays.

*Full descriptions of outputs, figures, and feature definitions are provided in the **Supplementary Documentation**.*
